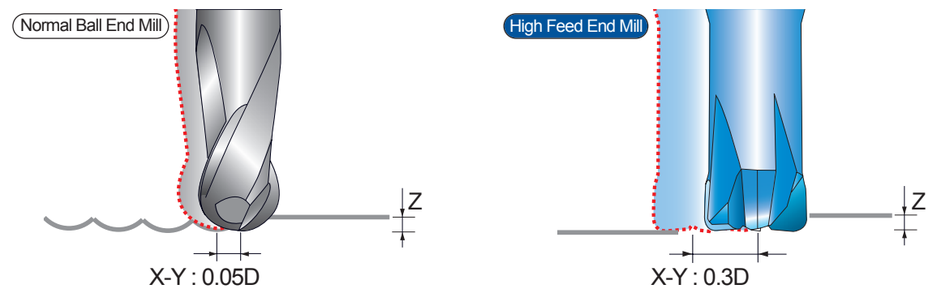
High Feed End Mill Capabilities :

- ☑ High speed roughing
- ☑ High speed finishing... Mirror-like surface

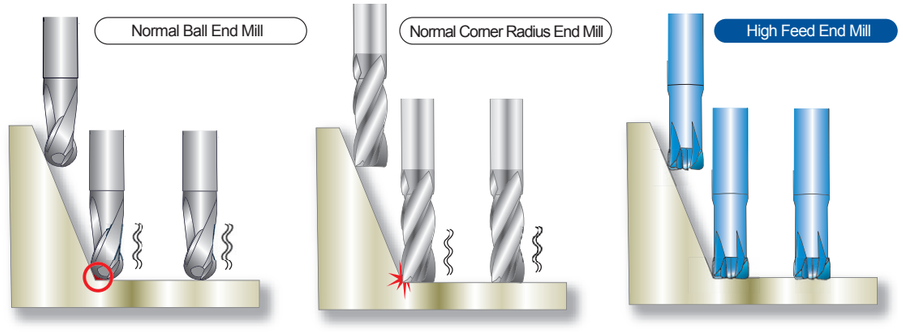


▶ More number of flutes than the normal 2F ball E/M results in high-feed cutting.
For X - Y wide cutting pitch, high effective cutting performs in short tool working time.

(Example of performance : for the material HRc 50~55)

ITEM	SIZE	RPM	FEED	DEPTH OF CUT	
				Z(mm)	X-Y(mm)
HIGH FEED END MILL	4F Ø10 X R2	5,400	11,000	0.2	3.0
NORMAL BALL END MILL	2F Ø10 X R5	7,500	2,500	0.2	0.5

▶ For cutting on slopes and corners, the remaining part to be cut is smaller than one that remains after working with normal ball End Mill. It saves the time and cost



▶ By using straight flute, the rigidity of corner radius is improved. And it's also possible to get less damage to end teeth and radius than normal radius End Mill.
